Our tyres live longer.

New Continental tyres
They are long lasting, fuel saving, retreadable and regroovable, and a key cornerstone for the lowest overall driving costs.

Casing management
ContiCasingManagement ensures best casing asset management with professional tools such as the ContiCasingBank.

Retreading
The cost-effective, eco-friendly and premium quality solution to prolong the life of your Continental tyres.

New tyres, multiple lives.
For lowest overall driving costs.
Continental invests continuously in the development of sustainable innovations for economically and ecologically efficient mobility. The international automotive supplier and tyre manufacturer has set itself the goal of continuously improving the efficiency of its commercial vehicle tyres in terms of their durability, mileage and fuel consumption. Durable tyres with low rolling resistance and retreadability are an advantage not only to the customer, but also consume less energy and valuable raw materials over their entire life cycle.

The environmentally-friendly handling of natural resources is of particular concern to Continental. In a production concept that is globally unique in the tyre industry, remoulding and rubber recycling have been combined for this purpose at the ContiLifeCycle factory. The company is also working on making it possible to use renewable raw materials from temperate climates such as dandelion rubber for industrial tyre production in the future.

Continental has already received several awards for its commitment to this, including the European Environment “GreenTec Award”, the “European Transport Award for Sustainability” for the “Tyre Innovation of the Year” and the Joseph-von-Fraunhofer Award for Applied Research. The premium tyre manufacturer has also committed itself to the European Chemicals Ordinance REACH, which regulates the registration, assessment, authorisation and restriction of chemical substances. In the future, Continental will continue to work on optimising the sustainable performance of its commercial vehicle tyres in order to make a contribution towards the protection of the environment and a clean future.

Continental retreads

Look like new, run like new!

Continental Truck Tyres offer more than just premium quality, high mileage and low consumption levels. Along with higher standards in product, system and service, they are a part of the comprehensive concept toward the improvement of efficiency in fleet management. New Continental Truck Tyres are profitable in the long-term. Their advantages extend beyond a single tyre life. Through Continental’s innovative and professional retreading solutions you can breathe life into your tyres for a second time. This supports to reach the lowest overall driving costs.

With our customers’ needs in mind, we continually redesign Continental Truck Tyres for maximum efficiency. In fact, we design them to last long beyond the normal service life of new tyres – thanks to our special casing. They are durable, fuel-efficient and can be improved and retreaded. Continental invests millions every year into research and development that leads to increased performance of our new tyres and even new standards in endurance and efficiency. Our house has been the brand promise of each tyre life to ensure an optimised final performance. Continental retreads rest upon the same pattern technology as our new tyres and thus perform at a maximum level.

When you choose truck tyres from Continental, you’re not only buying a premium product but you’re also profiting from an additional thought-out system that optimises fleet management efficiency and productivity while simultaneously reducing cost. Due to the superior quality and service life of each tyre as well as the comprehensive service package, the ContiLifeCycle guarantees the lowest overall driving costs throughout the entire service life of the tyre.

New Continental tyres

Continental develops truck tyres that suit the unique conditions of your transport activities. The long-lasting casing is the driving reason why Continental tyres are so economical. Built with optimised and perfectly coordinated reinforcements, compounds and a suitable contour for any application, the Continental casing achieves outstanding structural durability.

Durablety that pays off

All Continental-brands with the “REGROOVABLE” imprint on the sidewall have been designed for improving, prolonging the life of a tire even further.

Casing management

The casing management provides the greatest possible transparency and flexibility at all times. We take care of your casing from inspection and processing to recycling and disposal. You can manage all your used casings through our convenient online portal. This gives your company a great deal of freedom and control.

> A particularly valuable service.

Retreading

A new tyre life begins! Continental’s premium retreading brands ContiLife™ and ContiRec™ offer high quality for fair prices and protect the environment.

ContiLife™ is our hot retreading solution. The retreaded tyres are produced with the same technology as new Continental tyres.

> The cost-effective, eco-friendly and premium quality solution.

ContiRec™ is our cold retreading solution, based on new tyre technology and realised with certified partners in the ContiLifeCycle network.

> The cost-effective, eco-friendly and premium quality solution.

Environmentally-friendly innovations for the future.
