

## Continental Presents New ContiConnect™ Version with Enhanced Feature Set

- **New features mainly based on fleet managers' feedback and requests**
- **More individual configuration options**
- **Improved interface usability and customer experience**

Hanover, October 25, 2018. Continental, technology company and manufacturer of premium tires, today released the first update of its digital tire monitoring platform ContiConnect. The web portal now has more functions, and the appearance of the entire application has been improved. The new features link the ContiConnect services directly with fleet operations. Thereby tire management can be improved by using digital monitoring data for physical tire maintenance.

These are the main new features, which are available for all ContiConnect users as of today:

- Individual notification rules regarding tire temperature and pressure with custom thresholds
- New filling assistant supports precise tire inflation regardless of the tire's temperature
- Printable task lists with open to-dos for efficient overview of maintenance tasks for workshop employees
- Data export enables individualized analyses and allows for processing in further systems
- Manual tire data upload to the web portal, called ContiConnect Light, enables tire monitoring without a yard reader station or telematics integration

The new features were created on the basis of customer feedback. Karim Fraiss, Head of Marketing & Operations Digital Solutions at Continental Commercial Vehicles Tires, emphasizes the importance of user feedback: "Customer feedback is very important for our further development of ContiConnect and its features according to fleet operators' needs. In the future, we want to put even more focus on our co-creation approach in order to maximize the value we can deliver to customers using our digital tire monitoring platform."

Since 2013, Continental's Commercial Vehicle Tires business unit has brought its ContiPressureCheck™ tire pressure monitoring system to market around the world and consistently developed and enhanced its digital solutions. The tire monitoring system for individual vehicles is now integrated into solutions from more than 35 telematics providers worldwide. Since 2017, it has been complemented by ContiConnect Yard, a solution for monitoring the tires of multiple vehicles, which works using a yard reader station in the fleet yard. It has already been successfully launched in 15 markets worldwide. Here, data is transmitted directly to fleet managers

to assist them in monitoring tire conditions. In the event of deviations from the optimum status, ContiConnect sends notifications and suggests corrective measures. At the IAA Commercial Vehicles 2018, Continental also presented ContiConnect Live, available from the second quarter of 2019, which informs operators of truck and bus fleets immediately if there is a problem with the temperature or pressure of a tire, even when the vehicle is on the road. Further information can be found on the website: [www.conticonnect.com](http://www.conticonnect.com)

**Continental** develops pioneering technologies and services for sustainable and connected mobility of people and their goods. Founded in 1871, the technology company offers safe, efficient, intelligent and affordable solutions for vehicles, machines, traffic and transport. In 2017, Continental generated sales of €44 billion and currently employs more than 243,000 people in 60 countries.

The **Tire division** has 24 production and development locations worldwide. As one of the leading tire manufacturers with around 54,000 employees, the division posted sales of €11.3 billion in 2017. Continental ranks among the technology leaders in tire production and offers a broad product range for passenger cars, commercial vehicles and two-wheelers. Through continuous investment in R&D, Continental makes a major contribution to safe, cost-effective and ecologically efficient mobility. The Tire division's portfolio includes services for the tire trade and for fleet applications, as well as digital management systems for commercial vehicle tires.
