

Continental 
The Future in Motion

Taming the winter

ENHANCED BY GERMAN TECHNOLOGY

The new VanContact™ Ice

- › Superb mileage performance on wintry surfaces thanks to an optimised Nordic Matrix Compound
- › Powerful handling and braking under all wintry conditions through the intelligent pattern design
- › Safe and outstanding ice performance throughout the service life due to a new hardened stud

**GERMAN
TECHNOLOGY**

Superb mileage and safety on snow and ice.

For all kinds of vans in hardest wintertimes.

Technical highlights:

Superb mileage performance on wintry surfaces thanks to an optimised Nordic Matrix Compound. The optimised Nordic Matrix Compound consists of silica, oil and carbon black to provide a higher overall performance level. The silica improves performance on wet surfaces, the added oil ensures a better handling in winter conditions, while the carbon black facilitates a superb mileage. All in all, the tyre's new matrix is especially well optimised for Nordic roads.

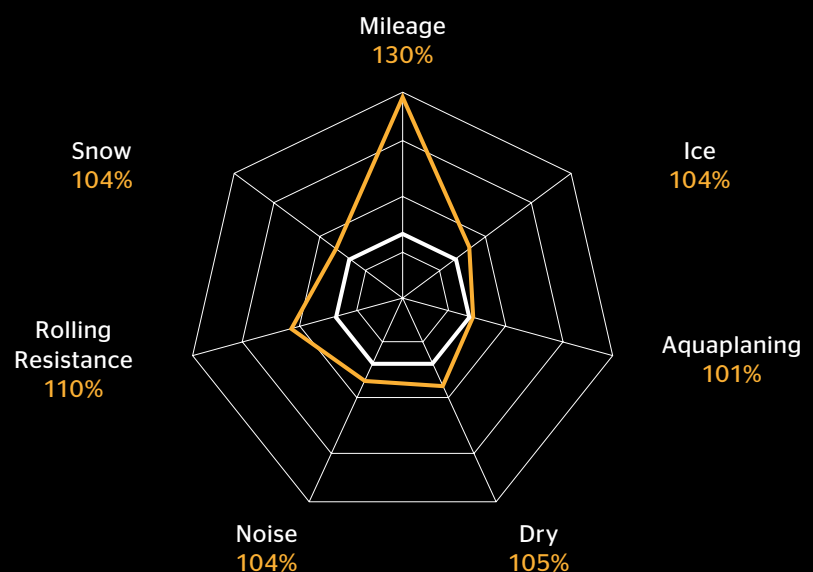

Powerful handling and braking under all wintry conditions through the intelligent pattern design. The new VanContact™ Ice delivers powerful and safe traction under all wintry conditions. For better grip and handling, especially during cornering, there are interlocking sipes around the pattern, aligned in the left and right driving direction. Additionally, a deeper area around the stud - the new Ramp Ice Reservoir - catches loose ice from the street so the stud can penetrate the ice directly to ensure ultimate performance on ice.

Safe and outstanding ice performance throughout the service life due to a new hardened stud. The brand-new stud is made of a special hardened steel, which is seamlessly incorporated into the tyre's fabric compound in order to reduce stud loss over the service life. Both the tyre and the stud wear down uniformly, thus ensuring a striking interaction between the stud and the pattern, and a maximum level of performance at all times.

Tyre performance:

— VanContact™ Ice
— Vanco™ IceContact = 100%

Tyre dimensions:

Tyre width in mm	Tyre cross section	Rim size in inches	Speed symbol	Load index
185-235	Series 55-75	15-17	N/R	101-121
