

# Let it snow. Let it rain. Let it freeze.

## The new WinterContact™ TS 870 P.

German engineered safety to master any winter conditions.

- Handle your car precisely on snow and ice thanks to its intelligent sipe and pattern concept.
- Experience excellent wet performance due to a new composition of our CoolChili™ compound.
- Benefit from high mileage and low rolling resistance leading to low fuel consumption.

# The new WinterContact™ TS 870 P.

## Experience a true master of all conditions.

Whenever a new WinterContact™ is developed we give the highest priority to a constant enhancement of the essential safety features, such as snow handling, snow grip and ice braking. In addition, we focus on an improved performance on wet and dry ground, high mileage and low rolling resistance. And when the result is as convincing as this one, we can proudly speak of a true master of all conditions.

### The winter won't give you chills.

Did you know that nothing adheres better to snow than snow itself? Here's a tyre that transfers this knowledge onto the street. Due to an improved configuration of steep parallel sipes, more snow can be collected from the ground. This ensures a stronger grip and gives you more controlled handling. And whenever you have to brake, long wiping edges enable extra-quick drainage of water and slush to reduce the braking distance on frozen ground.

### Just drain the rain away.

Since winter days can surprise you with rain, we worked on a piece of technology to ensure excellent driving behaviour on wet surfaces. Thanks to an improved composition of our CoolChili™ compound, which consists of new sustainable ingredients, you can always count on enhanced wet braking, while special hydro grooves ensure outstanding aquaplaning performance. So, whenever it gets wet, you already know that you are perfectly prepared.

### Keep rolling. And rolling. And rolling.

Less rolling resistance results in lower fuel consumption, while less abrasion leads to higher mileage. So much for theory. This is how we put it into practice: A tailor-made flexible polymer matrix with strong molecular chains ensures less abrasion on the road and extends the longevity of your tyre. And who would say no to a long-lasting tyre that helps you to save money?

## Performance.

## Dimensions.

Tyre width in mm:

**205-255**

Tyre cross section:

**35-65**

Rim size in inches:

**16-21**

Speed symbol:

**H/T/V/W**

New tyre sizes and dimensions  
will be available in 2022.
